^{13}C CPMAS NMR spectrum of form B

20 kHz spinning, 28407 scans with 2.5 mm probe (~12 mg)

FIGURE 11
DSC of Form A

The thermal profile of form A by DSC shows multiple events, at peak temperatures about 110, 123, 148-152 and 174°C. Depending on the sample history, events at 123 and 148-152 may or may not be present.

FIGURE 12
DSC of Form B

The thermal profile of form B displays one melting endotherm event at onset temperature about 173 to 175°C.

FIGURE 13
DSC of Form C

Form C has three thermal events at peak temperature about 153, 154 and 174°C shown in DSC thermogram.

FIGURE 14
Form D DSC1

FIGURE 15
Form D DSC2

By DSC, form D shows a broad endotherm between 30 to 130°C and a sharp melting endotherm with on set temperature about 174°C. The peak temperature of the first endotherm peak may vary from 80 to 115°C depending on drying condition.

FIGURE 16

Form E

By DSC, form E shows a broad endotherm with a peak temperature about 116°C and a sharp melting endotherm with on set temperature about 174°C.
